

## Processing Talk Article – March 2008

Distributors needed for Flow-Mon 'Sight Indicators', 'Flow Switches' & 'Flow Rate Indicators'

Flow-Mon Ltd are looking for new distributors throughout the world for their range of flow instruments. The product range consists of 'sight flow indicators', 'flow rate indicators' and 'flow switches' which can have threaded BSP and NPT connections, a variety of flange connections and wafer style connections that can slip easily into processing control pipe-work.

Christian Freeman has just returned from Brazil on a trade mission to Sao Paulo with Yorkshire Forward UKTI, looking for new distributors in South America with the majority of contacts wanting to represent us in Brazil. Currently we would love to hear from potential distributors in other South American Countries, Russia, Eastern Europe, Japan, Africa, The Middle East, Australia and the Ocean Pacific Areas.

We have a great relationship with our current distributors and are looking to foster strong relationships for the future in countries where we know are products end up in but do not have any direct relationship with. If you have any interest we'd love to communicate further. Please contact us at the following .....
