

## **Flow-Mon Robust Flow Rate Indicator Switches and Sight Indicators**

For the last 36 years Flow-Mon Ltd have been manufacturing 'Flow Rate Indicator Switches' in the UK and more recently 2 variants of 'Sight Indicators'. Both product lines are constructed in a variety of materials with a 'ROBUST' design and 'SIMPLE' principle. These products are distributed around the world and are known for their long life span and ease of installation and maintenance.

Interest in distribution of the Flow-Mon product range is more than welcome as we are always looking for new markets, outposts and positive relationships with progressive companies in the Flow Control and Process Control Industry.

Our Flow Indicators can be fitted on pipes from ¼ inch to 12 inch and also have the option of fitting up to 4 independent alarm/switch settings. The 'Micro-switch' settings are fully adjustable across the full range of flow and serve to act as 'low' or 'high' alarm points and aid in plant protection. These switches also come as ATEX versions and a 4-10mA OUTPUT indication is also available on the Flow-Mon 'flow indicators'.

For further information on our complete product range, or if you'd like to distribute these products, please request a brochure and contact Flow-Mon Ltd at [sales@flow-mon.com](mailto:sales@flow-mon.com)
